                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
(October 1998 version). The genomic sequence was searched against (ftp://ncbi.nlm.nlm.gov/blast/db) and the CDNA sequence database at RGP. Protein homologies of the coding regions were searched against RGP. Protein homologies of the coding regions were searched against the identified CDNA sequences using BLASTP 2.0 with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and 'like protein'. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from SPG to Ty of the PAC clone. This sequence of PQ001B06 clone has an overlap with P0671B11.

                   similarity to other proteins are named after the database hits. Genes without significant peptide similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (seam Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/). Simple repeats are identified by repeatmasker (Arian Smit, http://ftp.genome.washington.edu/RM/Repeatmasker.html).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   /rpt_family="SIMPLEGUY1|SIMPLEGUY1 is a putative non-autonomous DNA transposon - a consensus."

It may be used in the production of transpenic cells which can produce the encoded acquired resistance protein. Such transpenic plant cells are useful in the production of plants having an increased level of resistance against disease caused by plant pathogens, e.g. bacteria, mycoplasmas, fungi, insects, nematodes, viruses, and viroids.

and their coding sequences from Arabidopsis thaliana, Brassica napus.

Nicotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus annuus and Solanum tuberosum. NIM1 is one of the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The gene and protein can be used to produce transgenic plants resistant to diseases caused by viruses, such as tobacco or cucumber mosaic virus, ringspot virus, pelargonium leaf curl virus, red clover mottle virus, remato bushy stunt virus, fungi, including Phythophthora parasitica and Peronospora tabacina, bacteria such as Pseudomonas syringae and Peabaci, insects, including aphids and lepidoptera and nematodes such as Meloidogyne incognita. In particular they can be used against disease
                                                                                                                                                                                                                                                                                                                                                                                                           ö
present invention is concerned with the isolation of NIM1 homologues
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               419

The present invention is concerned with the isolation of NIMI homologues and their coding sequences from Arabidopsis thaliana, Brassica napus, Micotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus annuus and Solanum tuberosum. NIMI is one off the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The gene and protein can be used to produce transgenic plants resistant to diseases caused by viruses, such as tobacco or cucumber mosaic virus, ringspot virus, pelargonium leaf curl virus, red clover mottle virus, remato bushy stunt virus, fungi, including Phythophthora parasitica and Peronospora tabacina, bacteria such as Pseudomonas syringae and P. tabaci, insects, including aphids and lepidoptera and nematodes such as Meloidogyne incognita. In particular they can be used against disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  426
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   103

expression and broad spectrum disease resistance in plants, are homologues of Arabidopsis NIMI gene

English. Claim 3; Page 127-130; 152pp;

The present invention is concerned with the isolation of NIMI homologues and their coding sequences from Arabidopsis thaliana, Brassica napus, Nicotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus annuus and Solanum tuberosum. NIMI is one of the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The gene and protein can be used to produce transgenic plants resistant to diseases caused by viruses, such as tobacco or cucumber mosaic virus, ringspot virus, pelargonium leaf curl virus, red clover mottle virus, tomato bushy stunt virus, fungi, including Phythophthora parasitica and Peronospora tabacina, bacteria such as Pseudomonas syringae and P. tabaci, including aphids and lepidoptera and nematodes such as Mellidogyne incognita. In particular they can be used against disease organisms of maize.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention is concerned with the isolation of NIMI homologues and their coding sequences from Arabidopsis thaliana, Brassica napus, Nicotiana tabacum, Lycopersicon esculentum, Beta vulgaris, Helianthus annous and Solanum tubercoum, NIMI is one of the proteins involved in the signal transduction cascade leading to systemic acquired resistance (SAR) in plants. This gives the plants an increased resistance to disease. The gene and protein can be used to produce transgenic plants resistant to diseases caused by viruses, such as tobacco or cucumber mosaic virus, tringspot virus, pelargonium leaf curl virus, red clover mottle virus, tomato bushy stunt virus, fungi, including Phythophthora parasitica and Peronospora tabacina, bacteria such as Peeudomonas syringae and predidionation in particular they can be used against disease

                                                                                                                                                                                                                                                                                                                                                             The sequence is that of the acquired resistance gene NPRI. It may be used in the production of transgenic cells which can produce the enco acquired resistance protein. Such transgenic plants cells are useful in the production of plants having an increased level of resistance against disease caused by plant pathogens, e.g. bacteria, mycoplasmas, fungi, insects, nematodes, viruses, and viroids.

This curve incomes the structure incomes the protection of an immunomodulated plant having a first level of resistance and involves treatment with at least 1 microbicide that confers a second level of resistance, such that the plants have a third level of resistance greater than the sum of the first two levels. The method can be applied to a wide variety of plants (cereals, fruits, oilseeds, vegetables etc.) to protect against viruses, fungi, bacteria, insects and nematodes. The method provides a high level of resistance and allows a reduction in the amount of micobicide used. Since the process involves two different methods of protection, it is unlikely that the pathogen will develop resistance to

This sequence encodes a variant NIM-1 protein from Arabidopsis thaliana. This protein is used in a method resulting in the protection of an immunomodulated plant having a first level of resistance and involves treatment with at least 1 microbicide that confers a second level of resistance, such that the plants have a third level of resistance greater than the sum of the first two levels. The method can be applied to a wide variety of plants (cereals, fruits, oilseeds, vegetables etc.) to protect against viruses, fungi, bacteria, insects and nematodes. The method approvides a high level of resistance and allows a reduction in the amount of micobicide used. Since the process involves two different methods of protection, it is unlikely that the pathogen will develop resistance to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          936
